

Exporting DataGrid Data to Excel in Windows Applications

Source <http://www.dotnetspider.com/kb/Article2282.aspx>

This article explains how to export DataGrid Data To Excel in Windows Applications

.NET Classes used :

- Excel

```
Excel.ApplicationClass excel = new Excel.ApplicationClass();

        excel.Application.Workbooks.Add(true);
        System.Data.DataTable table = ds.Tables[0];
        int ColumnIndex=0;
        foreach(DataColumn col in table.Columns)
        {
            ColumnIndex++;
            excel.Cells[1,ColumnIndex]=col.ColumnName;
        }
        int rowIndex=0;
        foreach(DataRow row in table.Rows)
        {
            rowIndex++;
            ColumnIndex=0;
            foreach(DataColumn col in table.Columns)
            {
                ColumnIndex++;

                excel.Cells[rowIndex+1,ColumnIndex]=row[col.ColumnName].ToString();
            }
        }
```
