

How to set your printing paper size through program?

| Source | http://www.dotnetspider.com/kb/Article76.aspx |
|---------------|---|

The following code instantiates a PrintDocument and then enumerates all the supported Paper sizes and selects the appropriate PaperSize.

This PaperSize is assigned to the DefaultPageSettings object of the PrintDocument.

If no appropriate PaperSize is found (i.e., PaperSize==nul) then the Printer's default setting that is configured from the control panel is used.

I have skipped the actual printing logic.

```
PrintDocument pd = new PrintDocument();

PaperSize p=null;

foreach(PaperSize ps in pd.PrinterSettings.PaperSizes)
{
    if(ps.PaperName.Equals("A3"))
        p = ps;
}

pd.DefaultPageSettings.PaperSize = p;

//Register PrintPageEventHandler

pd.Print();
```
