MDI Applications and Menus

Sr. No.	Assignment Question
1.	Phoenix Systems is a software development firm in Nevada. They are currently developing customized applications. As per their client requirements, they are required to create an MDI application, which will have various projects names on the menu. Within each menu, there will be two sub-menus, namely Project Details and Staff Details.

Assume you are one of the developer at Phoenix Systems and have to perform the following operations:
- Ø Create an MDI parent form.
- Ø Create two MDI child forms, each for Project Details and Staff Details.
- Ø Project Details form will have the following fields:
  1. Name
  2. Client Name
  3. Start Date in international format
  4. End Date in international format
  5. Software Required
  6. Hardware Required
- Ø Staff Details form will have the following fields:
  1. Name
  2. Department
  3. E-mail ID
  4. Skills such as programming languages known and courses done
  5. Experience in years
- Ø Use various controls required to create the forms.
- Ø Use ToolStrip, ContextMenuStrip, and StatusStrip controls to provide formatting options such as copy and paste and tool tip for each control.
- Ø Implement necessary validations for the control.

You have decided to use Windows Forms and C# language to develop the above application.

Test the output by compiling the program and executing the same using Visual Studio 2005 IDE.
